Product Discontinuation Notification

Dear valued customers and distributors:

Nippon Pulse America, Inc. (NPA) submits to you the following notification regarding the future availability of one of the PMX controllers.

- **PMX-4EX-CR**

Due to our supplier's unforeseen discontinuation of the microprocessor, the PMX-4EX-CR has been discontinued. There are no plans to redesign this older version of the 2nd generation motion core. We encourage our customers to consider moving to the generation 4 motion core, the CMD-4CR.

The CMD-4CR is the 4th generation of our motion core product line. Nippon Pulse has made considerable efforts to ensure that this form factor and usage will have a long life. As the newest generation, the CMD-4CR is functionally upgraded from the PMX-4EX-CR. However, some functions are different.

- The software developed for the PMX-4EX-CR can control the CMD-4CR with a change to a different DLL and a couple of command changes.
- In terms of hardware, the PMX-4EX-CR uses three 40pin 2mm pitch connectors (120 pins), while the CMD-4CR uses three 50pin 1.27mm pitch connectors (150 pins).

Please feel free to contact our sales team if you have any questions.

Sincerely,

Mikio Harada
President
